Civil war has been a recurring feature of human societies throughout history - and an essential catalyst for major international conflict. And since 1945 the number of civil wars in the world has grown steadily, bringing devastation on a scale more traditionally associated with international wars. In spite of this, there is no classic treatise on civil war to compare with the classic works we have on war, revolution, or peace. On the one hand, historians have tended to treat the 'big' civil wars such as the American and the Spanish in isolation. On the other, social scientists have concentrated on identifying common patterns, without looking in too much detail at the specifics of any given conflict. Focusing on the numerous civil conflicts that

have occurred throughout the world since the Second World War, Bill Kissane bridges this gap, asking what the recent social science literature adds to what we already know about civil war, but also how insights from the historical literature, from the ancient Greeks onwards, can help explain the violent experience of so many parts of the world since 1945. At its heart is the question of what makes the contemporary challenge posed by civil war so different to that of past periods - and what, if anything, is new about the contemporary experience of civil war at the dawn of the twenty-first century.

The book advances the current state of film audience research and of our knowledge of sexuality in transnational contexts by analysing how French LGBTQ films are seen in Spain and Spanish ones in France. It studies films (in various media and platforms) and their reception across four languages (Spanish, French, Catalan, English) and considers and engages with participants from across a range of digital and physical audience locations, with a particular focus on festivals. It examines films that chronicle the local (in portraying national and sub-national identities) and draws on the regional-global (translating and transferring foreign models of non-heterosexual experience). No comparative and crosscutting study with audience

research at its heart has yet been undertaken.

For decades, governments have tried to foster industrial competitiveness and economic growth. Many instruments are known to work, and many lessons have been learned. However, humanity is increasingly feeling the effects of natural resource depletion. The rate of this depletion is deeply unsustainable, and it is – as of yet – inextricably linked to economic growth and development. To preserve acceptable living conditions for future generations, while at the same time creating these conditions for millions of poor in the first place, we must achieve a de-linking of economic activity and resource depletion. This book identifies the drivers and

success factors of green industrial policy, which seeks to reconcile the synergies and trade-offs which exist between economic and environmental goals. Greening the economy is a goal which will require enormous investment. As markets are currently failing to provide the required incentives for environmental sustainability, governments must intervene and provide ‘ policy rents ’ for investments in sustainability while withdrawing rents from polluting investments. In this they will face the risk of political capture by interest groups and difficult choices among technologies. Rent management is therefore the heart of green industrial policy and the focus of this book. On top of this, the country examples provided in this volume focus on the emerging powers,

which will have an important influence the future of our planet. However, the lessons learned are valuable not only for countries introducing green industrial policies for the first time, but also for those under pressure to reform existing policies. This book will be of interest to students, researchers and policymakers in the areas of energy policy, sustainable development, industrial economics and ecological economics.

Middlebrow Cinema challenges an often uninterrogated hostility to middlebrow culture that frequently dismisses it as conservative, which it often is not, and

feminized or middle-class, which it often is. The volume defines the term relationally against shifting concepts of ' high ' and ' low ', and considers its deployment in connection with text, audience and institution. In exploring the concept of the middlebrow, this book recovers films that were widely meaningful to contemporary audiences, yet sometimes overlooked by critics interested in popular and arthouse extremes. It also addresses the question of socially-mobile audiences, who might express their aspirations through film-watching; and traces the cultural consequences of the movement of films across borders and between institutions. The first study of its kind, the volume comprises 11 original essays that test the purchase of

Cognitive interviewing, based on the self-report

methods of Ericsson and Simon, is a key form of qualitative research that has developed over the past thirty years. The primary objective of cognitive interviewing, also known as cognitive testing, is to understand the cognitive mechanisms underlying the survey-response process. An equally important aim is contributing to the development of best practices for writing survey questions that are well understood and that produce low levels of response error. In particular, an important applied objective is the evaluation of a particular set of questions, items, or other materials under development by questionnaire designers, to determine means for rewording, reordering, or reconceptualizing. Hence, as well as providing an

empirical, psychologically oriented framework for the general study of questionnaire design, cognitive interviewing has been adopted as a 'production' mechanism for the improvement of a wide variety of survey questions, whether factual, behavioral, or attitudinal in nature. As with other methods that rely on qualitative data, cognitive interviewing has increasingly been criticized for being lax in the critical area of the development of systematic methods for data reduction, analysis, and reporting of results. Practitioners tend to conduct cognitive interviewing in varying ways, and the data coding and compilation activities undertaken are often nonstandardized and poorly described. There is a considerable need for further development--and
